

# BioBlitz around the Baltic Sea

27th of August 2020

## YOU ARE INVITED!

We invite all students, teachers, principals, coordinators and friends of the Baltic Sea to join the Baltic Sea Project's BioBlitz on 27th of August.

The Baltic Sea Project within the UNESCO ASPnet is launching this citizen science event to celebrate the Baltic Sea Day initiative by John Nurminen Foundation.

## STEP 1: REGISTER!

If you are interested in celebrating the Baltic Sea Day on 27th of August internationally together, then register here! Registration is needed so we can send you instructions on how to participate and contact you after winning any prizes.

## STEP 2: WATCH A TUTORIAL VIDEO

We'll send you a tutorial video at the beginning of August to explain all the steps! You can start by downloading the iNaturalist app from Google Play or App Store to your mobile device. This is the app that will help you to recognize species that you don't know yet and collect citizen science data.

## STEP 3: BALTIC SEA BIOBLITZ ON 27.08

Go outside on the 27th of August and bring your friends. Investigate the nature and look for life. Enter as many different species as possible during one day - this is called a BioBlitz. Make sure you follow the steps explained in the tutorial, and win prizes.
